

## ASSIGNMENT CHAPTER FOR-8.

- 1) I collect data from the area koduru in krishna district in A.P and compare with Nuanigadda in krishna district in Andhra Pradesh.

### Koduru

Basis	2017	2018	2019	2020	2021
no. of beds in hospital	20	23	28	30	35

the number of children who are receiving various immunizations.	300	380	450	500	460
-----------------------------------------------------------------	-----	-----	-----	-----	-----

The number of students completing their primary education.	250	300	350	400	450
------------------------------------------------------------	-----	-----	-----	-----	-----

no. of beds in hospitals, the  
no. of children who are receiving  
various immunizations, the no. of  
students completing their primary  
education are increasing.

### Availability

Base	2017	2018	2019	2020	2021
No. of beds in hospitals	50	45	30	55	65

The no. of children who are receiving various immunizations	510	520	665	670	730
-------------------------------------------------------------	-----	-----	-----	-----	-----

The no. of students completing their primary education	450	550	655	620	720
--------------------------------------------------------	-----	-----	-----	-----	-----

we can compare two tables  
Kodur and Anavigadda.

- 1) The no. of beds in hospitals are more in Anavigadda compare more than Kodur. But in Kodur continuously increasing in Anavigadda breaks in increasing no. of beds.
- 2) The no. of children who are receiving various immunizations are continuously increasing in two villages Kodur & Anavigadda have more than Kodur. Not only the rate of increasing.
- 3) The no. of students completing their primary education is also increasing continuously in two villages. Kodur having less than Anavigadda But the increasing rate is also

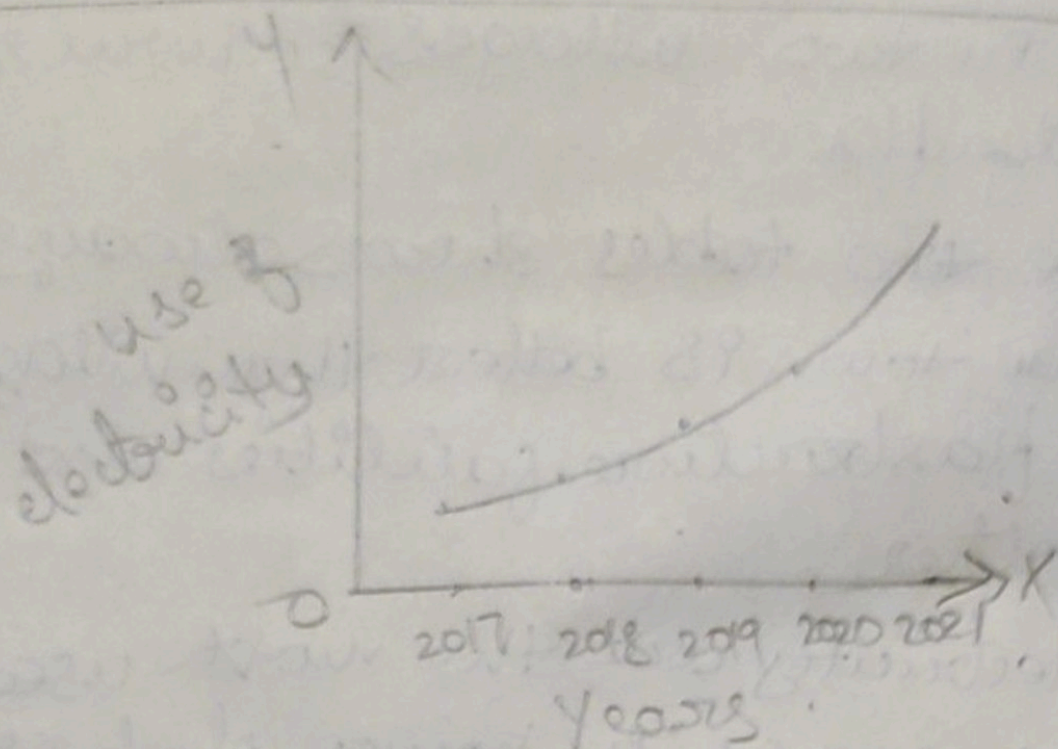

same in two villages Koduru & Ananigadda.

u) These two tables show always ~~town~~ town is better than village in infrastructure facilities and also other.

Q. Electricity are the most-used energy sources in homes. Electricity is important only source in home. It is used not only in home but also 43% of electricity used in residential sector end-use energy consumption in 2020.

The using of electricity is increasing rapidly from the last five years.

They spend on electricity is also increasing from last five years. Max. rich people are spent up to 500/- & poor people paid electricity up to below 100/- at every month.

AP Power development company limited supplies power to our house holds. & this is divided into three divisions namely APEPDCL, APCPDCL and APSPDCL which distribute

The power to the house holds  
agriculture & the industries  
\* alternative source of electricity:-

wind power, solar energy,  
nuclear energy, hydro electricity  
tidal energy etc. all are sources  
alternatively for electricity. These  
all are cheaper cost than electricity.

The measurement of electrical  
energy is completely dependent on  
power which is measured in watt,  
kilowatt, megawatt, Gigawatt & time  
which is measured in an hour. Joule  
is the smallest unit of energy. But  
for some bigger calculation, some better  
units are required.
